

Street Lighting

BODY: The housing is made in grey RAL-7035, with glass reinforced polyester and with waterproof joints of multicelular neoprene and fixing stainless steel clips which assures the IP-65 protection degree of the luminaire.

DIFFUSER: Made in unbreakable anti-vandal polycarbonate, as well as self-extinguishable anti-aging undestructive. A longitudinal prism with the best flux transmission and glare-free for a better photometric control and distribution according to C.I.E. recommendation.

ARM: Side-entry (50 mm.).

ELECTRICAL INSTALLATION: Basic installation 220V/230V/50Hz depending on lamp. Cabled with flexible section wire of 1,5 mm² and insulated covering of PVC type h07V-K resistance at 105° and non flame propagator, according to norm UNE-21031. Upon request, other versions with different voltages and frecuencies, as well as energy saving gear with double power level with or without line controller and time-starter.
